LINEAR LIGHTING

LINEARE LIGHTING SOLUTION WITH LED-LIGHT STRIPS TO SET INDIVIDUAL ACCENTS IN THE INTERIOR DESIGN

Light doesn't just have one function in the home. Of course, lighting should illuminate the reading corner, kitchen worktop or dining table pleasantly and uniformly – but above all, light creates ambience and mood. The LED technology, which enables simple colour changes at the touch of a button, opens up completely new possibilities. So-called linear light in the form of LED stripes combined with aluminium profiles

is particularly popular for furnishing your own four walls. They can be fitted to walls, ceilings or furniture according to your own ideas and wishes and are used to highlight design elements in architecture or to arouse emotions through the interplay of light and shadow.

Atmospheric accents set with light: LED stripes, which often also allow a change of colour, can be used in many ways on walls, ceilings or in combination with furniture.

With the easy-to-install LED light stripes, ceilings, lines and edges can be accentuated. "But linear light is also becoming increasingly important for main lighting. For example, LED stripes today use special diffusers to create homogeneous light lines for effective lighting," explains Klaus-Peter Gommel from the German manufacturer DEKO-LIGHT. The light bands find their protected place in profiles specially

manufactured for this purpose and thus form the basis for the interplay of light and function. An important additional benefit: Installation in profiles also serves to dissipate the heat of the LEDs effectively and efficiently.

Designing with creativity: LED stripes can be used in many ways throughout the home, for example in the kitchen.

Even with challenging architecture, LED stripes set colourful and striking accents.

LED stripes are available in versions that can reproduce different colour temperatures. But white is not always white. "The decisive factor is colour temperature, from bright working light to mood and accent lighting", explains Klaus-Peter Gommel from the manufacturer DEKO-LIGHT. "Basically, a distinction is made between warm white, neutral white and cold white." This also influences the

typical areas of application: Warm white light is well suited for living rooms and bedrooms, neutral white is ideal for bathrooms and kitchens, and cool white for workspaces. If you want to remain flexible, you can use LED stripes with warm and cold white LEDs that can be individually adjusted via a controller.

Draw a clear, distinguishable line. A coloured LED stripe highlights the architecture of the home.

The stripe lights with energy-saving and durable LED technology are available in different versions: 1-channel stripes can represent only one colour, 2-channel stripes allow switching between two colours, and so on. In addition to the actual stripe light and the profile for the cover, the do-it-yourselfer also needs a power supply unit and a controller for installation, depending on your wishes and the design of the LED stripe with dimming option. At deko-light.com you will find an overview of the different versions of these versatile light sources. This allows the residents to create different moods

again and again, for example with changing light colours, or to dim the intensity of the lighting as desired or according to the time of day. While a simple switch for switching on and off is sufficient for 1-channel stripes, multi-coloured stripe lighting can be controlled from a smartphone, for example, using a remote control or suitable apps.

ALUMINIUM WITH PROFILE

DEKO-LIGHT aluminium profiles stand for innovative and uncompromising products in timeless design. They are developed with the highest precision. The smooth built-in and small dimensions allow the easy handling of both rigid and flexible LED stripes.

aluminium parts can be installed on wall, ceiling and floor parts for direct and indirect lighting. They can also be implemented as a built-in or mounting element in private and commercial environments.

ASSEMBLY FOR PROFILES & STRIPES

We supply customised products upon request. The prices are available on request.

989110 – Service Package I – cutting profile

profile is shortened to desired length, tolerance ± 1 mm | Saw loss 4 mm

989120 – Service Package II – cutting cover

cover is shortened to desired length, tolerance ± 1 mm | Saw loss 4 mm

989130 – Service Package III

a hole in end cap or profile on request

989140 – Service Package IV – cutting LED stripe

LED stripe is adapted to the desired length, considering the segment and maximum total length incl. soldering a cable with the desired length [min. 1m]. and open, tinned wire ends

989150 – Service Package V – joining and assembly

Combination and assembly of all components to a finished luminaire incl. function test and cable lug

940100 – supply line / cable

supply line / cable for LED stripe 1m with open, tinned wire ends take maximum cable lengths into account [billing is based on meters per order]

CONFIGURATOR – UNRIVALLED FLEXIBILITY

Linear lighting is the lighting trend of the hour! To make sure that you know exactly which LED stripes and profiles are suitable for your project and which dimensions and quantities you need, we offer our online configurator. Enter your individual application data and choose from our strips, profiles, covers, end caps and more – the configurator does the rest.
